V, h, gamma, CG, g
input du(t), dt, T_final, guards
1: Plant derivatives
residuals
f(z +/- h)
xdot, y
guess alpha, de, thr
2: Trim solver (M4) +trim/solve
x0, u0 (status OK)
x0, u0
x*, u*, status
3: Linearize (M5-A) +linear/linearize
f, z0, steps
A (8 states)
A, B
z +/- h
derivatives, column status
4: Jacobian step study +linear/jacobian
5: Flight modes +linear/modes
wn, zeta, tau, participation
x(t), u(t)
6: Time simulation (M5-B) +sim/run
t, x, y
nonlinear response
x(t), log, stop reason
u (held)
7: Controller slot +sim/sampleController
8: Linear vs nonlinear (M5-X) +linear/response
agreement vs amplitude
